

WO9010 WOW-901 BLACK

The QCM WOW Wet-On-Wet Series inks are optimized for reduced flash printing on short or long runs. These inks print well through a wide range of meshes as low as 83 and as high as 305 t/in. Higher mesh counts may be used, however there may be a loss of opacity.

Highlights

- Optimized for Wet-On-Wet printing, this series of QCM inks allows the printer to eliminate ink build up on short or long runs
- Designed for reduced flash printing
- For use with K2915 CURABLE REDUCER for even softer prints on lighter colors or over an under base
- Can be printed over a variety of under-bases

Printing Tips

- WOW inks print well through screen meshes in the range of 83-305 t/in (32-120 t/cm). Higher mesh counts may be used with a possible loss of opacity.
- Screens stretched to a minimum of 25 newtons are recommended.
- If using lower tension screens, adjust off contact accordingly.
- Use just enough squeegee pressure to deposit the ink on the surface of the shirt. This will enhance the opacity and also ensure a better cure. Try not to drive the ink into the fabric.
- A 70-80 durometer sharp squeegee is recommended.
- WOW inks are ready to print. Reduce if absolutely necessary with K2915 CURABLE REDUCER. Reducing the viscosity will also reduce the opacity and coverage of the ink.

Compliance

- Internationally compliant
- Non-phthalate
- <https://www.avientspecialtyinks.com/services/compliance-support>

Precautions

- The information above is given in good faith and does not release you from testing inks and fabrics to confirm suitability of substrate and application process to meet your customer standards and specifications.

Recommended Parameters
