Rutland™ CHILL™ LB LOW CURE **COLORS**

Rutland™ Chill™ LB Low Cure Colors are formulated to produce high opacity prints on Cotton/Poly Blends and 100% Polyester fabrics. These vibrant and bold colors demonstrate amazing printability on both manual and automatic presses. Chill LB LB Colors replace the NPT EL colors.

Highlights Printing Tips Wide cure temperature range from 250°F-300°F (121°C-148°C) For best results, use a print-flash-print technique to ensure sufficient ink 0 deposit on dark fabrics. Shears down quickly to a creamy, smooth body For challenging polyester fabrics, use Rutland LB0266 Chill LB LC Barrier Base as a base layer to achieve maximum bleed resistance. Formulated to be opaque for direct printing on both light or dark fabrics Adjust flash cure temperature and dwell time so ink is just dry to touch. Avoid excessive flash temperatures to protect fabric and migration of dyes. Energy savings and extra stability on problematic fabrics Depending on flash unit, a 3-5 second flash is adequate. Works well on manual or automatic presses Use 86-230t/in (34-90t/cm) mesh screens for best performance and opacity. A behavior for high-opacity low cure inks is to "body-up" or gain viscosity when at rest. Be sure to "Pre-shear" or agitate this ink before use to achieve optimal flow before printing. Be careful to not use high-speed drills or Compliance similar equipment that will create friction-heat that can cause the ink to Sustainability begin to cure. Store ink buckets up off of cold floors to reduce pre-sheer time. Non-phthalate Curing is a time and temperature process. Using a lower temperature, at a Internationally compliant Reduced lower belt speed will provide the best result without damaging the fabric. **Energy Use** Visit https://www.avientspecialtyinks.com/ Chill LB LC colors are not created for wet-on-wet printing. You should flash services/compliance-support between each color. **Precautions** Printers should always test the ink on their fabric under their process conditions before printing production runs. The information provided in this document is given in good faith and does not release you from testing inks and fabrics to confirm suitability of substrate and application process to meet your customer standards and specifications **Recommended Parameters**

Fabric Types

Poly blends, 100% Polyester

Flash & Cure

Flash: 150°F (66°C)

Cure: 250°F-300°F (121°C-149°C)

Clean Up

Non-phthalate press wash

Mesh

Count: 86- 230t/in (34 -90t/cm)

Tension: 18-35n/cm3

Pigment Loading

Health & Safety

Find SDS information here: www.avient.com/resources/safety-datasheets or contact your local CSR

Squeegee

Durometer: Medium: 60-70, 60/90/60

Profile: sharp, square

Stroke: 2 stroke, medium speed

Angle: 10°-20°

Additives

K2912 VISCOSITY BUSTER LC K2940 HUGGER CATALYST

Extender: Not recommended

Stencil

Standard Emulsion Off Contact: 1/16" (2mm) Emulsion Over Mesh: 15-20%

Storage

65°-90° F (18°-32° C) Avoid direct sunlight. Use within one year of receipt. Keep container well sealed.
